DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Joseph Maraia (Reg#55,926) on 07/23/2009.

IN THE CLAIMS

1. (Currently Amended)

A connection assembly for transferring a fluid, particularly a fluid containing active products, from a reservoir to a medical delivery device comprising:

a first connection element associated with the reservoir and comprising first retaining means and a reservoir interface;

a second connection element associated with the medical delivery device and comprising a medical delivery interface and second retaining means capable of cooperating with the first retaining means to form an irreversible connection between the two elements;

wherein the first and second connection elements further comprises a perforator capable of piercing a medicine vial, which is reversibly connectable to standard connectors allowing fluid transfer therethrough before an irreversible connection is

Art Unit: 3763

made with the other element, the respective retaining means is positioned between the perforator and the respective interface; and

wherein the first and second retaining means are arranged such that they cooperate with each other by clipping during a single translation movement of one connection element with respect to the other to make the connection irreversible; and wherein each perforator is aligned in the same direction at the time of the irreversible connection.

12. (Currently Amended)

A connection element for transfer of fluid, particularly fluid containing active products, from a reservoir to a medical delivery device, comprising:

a first retaining means associated with a first interface, wherein the first retaining means are arranged such that they cooperate with a second retaining means in another connection element by clipping during a single translation movement between the two connection elements to make an irreversible connection between the two connection elements, the second retaining means associated with a second interface; and

wherein the first and second retaining means further comprises a perforator capable of piercing a medicine vial, which is reversibly connectable to standard connectors allowing fluid transfer therethrough before an irreversible connection is made with the other element, the respective retaining means is positioned between the perforator and the respective interface; and

wherein each perforator is aligned in the same direction at the time of the irreversible connection.

Art Unit: 3763

18. **(Currently Amended)** A method for forming a connection for transferring a fluid, particularly a fluid containing active products, between a reservoir and a medical delivery device comprising the steps of:

(i) reversibly connecting at least one of a first connection element having a perforator capable of piercing a medicine vial, the first connection element associated with the reservoir and a second connection element having a perforator capable of piercing a medicine vial, the second connection element associated with the medical delivery device to respective standard connectors via the perforator allowing fluid transfer therethrough before an irreversible connection is made with the other connecting element;

(ii) translating the first connection element having a first retaining means and a reservoir interface relative to the second connection element having a second retaining means and a medical delivery device interface, the respective retaining means is positioned between the perforator and the respective interface;

(iii) irreversibly connecting together the translated first and second connection elements through cooperation of the first and second retaining means, wherein each perforator is aligned in the same direction at the time of the irreversible connection; and

(iv) transferring a fluid between the reservoir and the medical delivery device through the irreversibly connected first and second connection elements.

Allowable Subject Matter

Claims 1-27 are allowed over the prior art of record as amended in the 7/14/2009 and in this office action.

Art Unit: 3763

The following is an examiner's statement of reasons for allowance: The claims in this application have been allowed because the prior art of record fails to disclose either singly or in combination the claimed device of a connector assembly for the transfer of fluids comprising an active agent from the reservoir to a medical device for dosing.

The closest prior art of record is Thanawalla (USPN 4,161,949) and Erskine et al. (USPN5,280,614), however these references do not disclose the device as claimed or described above.

Regarding claims 1, 12 and 18, the closest prior art of record fails to teach among all the limitations or render obvious the specifics of the connection elements and the perforator connections.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher D. Koharski whose telephone number is 571-272-7230. The examiner can normally be reached on 7:30am to 4:00pm EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nick Lucchesi can be reached on 571-272-4977. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
